**QUESTION 1**

You are designing a business workflow and need to ensure the master data is accurate and conforms to all business rules.

Which of the following options are available? Note: There are 2 correct answers to this question.

- A. Set up additional validations using Business Rule Frameworkplus (BRFplus).
- B. Set up additional validations using a BADL.
- C. Set up validation rules during replication of the master data.
- D. Set up validation rules in SOA/ALE during master data processing.

Correct Answer: AB

QUESTION 2

How is database storage handled by SAP Master Data Governance (MDG) using the reuse mode? There are 2 correct answers to this question.

- A. Active data sets are held in the SAP MDG staging area also after change request activation.
- B. Tables defined in the SAP MDG data model store the active data.
- C. Existing ERP structures are used.
- D. Active data sets are removed from the SAP MDG staging area after change request activation.

Correct Answer: CD

QUESTION 3

Which of the following steps need to be performed to set up a parallel change request type for material? Note: There are 2 correct answers to this question.

- A. Create a new change request type and enable the request as parallel with business activity to process material.
- B. Create a new change request type and enable the request as a single object with business activity to create material.
- C. Assign the scope on entity level per entity type with business activity to create material.
- D. Assign the scope on entity level per entity type with business activity to process material.

Correct Answer: AD

QUESTION 4

You want to manage ERP vendors and customers using the standard business partner data model in SAP Master Data Governance (MDG). Which of the following statements are correct? Note: There are 3 correct answers to this question.

- A. SAP MDG uses the business partner data model to manage both vendors and customers.
- B. Multiple ERP vendors and ERP customers can be assigned to one business partner (BP).
- C. Customer vendor integration (CVI) configuration is not required.
- D. SAP MDG has separate data models to manage vendors and customers.
- E. The Vendor/Customer account group can be derived as per the configuration of the BP grouping.

Correct Answer: ABE

QUESTION 5

How to use context-based adaptations?

- A. The adaptation of a FPM application depends on runtime parameters. A particular adaptation, or configuration, is applied when the application is called.
- B. CBA reduces the need to make extra copies of application configurations.
- C. The parameters for CBA are provided by the generic MDG schema USMD_GEN: OTC, logical action, change request type, and change request step.
- D. Each adaptation of a configuration contains only the delta changes to its base configuration.
- E. None of the above.

Correct Answer: ABCD
