

C_PAII10_35^{Q&As}

C_PAII10_35 : SAP Certified Application Associate - SAP Predictive Analytics

Pass SAP C_PAII10_35 Exam with 100% Guarantee

Free Download Real Questions & Answers **PDF** and **VCE** file from:

https://www.pass4itsure.com/c_paii10_35.html

100% Passing Guarantee
100% Money Back Assurance

Following Questions and Answers are all new published by SAP Official Exam Center

- ⚙️ **Instant Download** After Purchase
- ⚙️ **100% Money Back** Guarantee
- ⚙️ **365 Days** Free Update
- ⚙️ **800,000+** Satisfied Customers

**QUESTION 1**

A user has created several analyses with a chain in the Predict room. What data can the user leverage in a visualization in the Visualize room when these analyses are executed successfully?

Note: There are 1 correct answers to this question.

- A. Data from one component from one analysis
- B. Data from one component from all analyses
- C. Data from all components from all analyses
- D. Data from all components from one analysis

Correct Answer: A

QUESTION 2

Predictive Power, Prediction Confidence and Model Graphs On the model graph plot: Note: There are 2 correct answers to this question.

- A. Produce deep analysis of the data using different visualization techniques, such as scatter matrix charts, parallel coordinates, cluster charts, and decision trees.
- B. Of the validation dataset of the perfect model and that of the random model". As the curve of the generated model approaches the curve of the perfect model, the value of the predictive power approaches 1.
- C. Of the training and validation datasets the training dataset and that of the validation dataset "divided by "the area found between the curve of the perfect model and that of the random model"

Correct Answer: BC

QUESTION 3

On the model curve plot, different options allow you to visualize: Note: There are 2 correct answers to this question.

- A. Exact profit values for a point for all the displayed curves.
- B. The curves for the different profit types: Detected, Lift, Normalized, and Customized. For more information on profit types, see the related topic.
- C. A web server (Apache Web Server for example). See the sections below to install Apache Web Server

Correct Answer: AB

QUESTION 4

Once the model has been generated, you must verify its validity by examining the performance indicators: Note: There

are 4 correct answers to this question.

A. The predictive power allows you to evaluate the explanatory power of the model, that is, its capacity to explain the target variable when applied to the training dataset. A perfect model would possess a predictive power equal to 1 and a completely random model would possess a predictive power equal to 0

B. The prediction confidence defines the degree of robustness of the model, that is, its capacity to achieve the same explanatory power when applied to a new dataset. In other words, the degree of robustness corresponds to the predictive power of the model applied to an application dataset. For this scenario, the model generated has the following performance indicators:

C. A quality indicator KI equal to 0.808

D. A robustness indicator KR equal to 0.992

E. The existing R is uninstalled and the registry entries and the R installation folder are removed from the machine

Correct Answer: ABCD

QUESTION 5

The Periodic with testing at the end strategy distributes:

Note: There are 4 correct answers to this question.

A. Three lines of the first 4/5 of the initial dataset are distributed to the training subset.

B. One line of the first 4/5 of the initial dataset is distributed to the validation sub-set.

C. If the entire 4/5 of the initial dataset is not yet distributed, distribution operations begin again at step 1. Otherwise, if the entire 4/5 of the initial dataset has been

D. distributed, distribution operations go to step

E. The final 1/5 of the initial dataset is sent as a block of data to the testing sub-set.

F. The name server and the server will be assigned a specific TCP port. By default, the startup scripts we use fix them, and they should probably set properly depending on the network strategy

Correct Answer: ABCD
