QUESTION 1

The figure shows the ABAP short dump of an aborted transaction in an SAP system. Which of the following statements are true?

Runtime Error - Description of Exception

Category: ABAP Programming Error
 Runtime Errors: TIME_OUT
 ABAP Program: IREPOR12
 Application Component: Not Assigned
 Date and Time: 01.12.2011 09:55:32

Short text:
Time limit exceeded.

What happened?:
The program "IREPOR12" has exceeded the maximum permitted runtime without interruption and has therefore been terminated.

Error analysis:
After a specific time, the program is terminated to make the work area available to other users who may be waiting. This is to prevent a work area being blocked unnecessarily long by, for example:
 - Endless loops (DO, WHILE, ...).
 - Database accesses with a large result set
 - Database accesses without a suitable index (full table scan)

The maximum runtime of a program is limited by the system profile parameter "rsdisp:mas_uptime". The current setting is 300 seconds. If this time limit is exceeded, the system attempts to cancel any running SQL statement or signals the ABAP processor to stop the running program. Then the system waits another 60 seconds maximum. If the program is then still active, the work process is restarted.

System Log: Local Analysis of twdf1903

Date: 01.12.2011

Time	Type	Hr	Clc	User	TCode	Priority	Grp	N	Text
09:55:32	DIA	000	100	CATCH	SE38	●	AB	0	Run-time error "TIME_OUT" occurred
09:55:32	DIA	000	100	CATCH	SE38	○	AB	1	> Short dump "111201 095532 twdf1903_DEV_00" generated

There are 2 correct answers to this question.

- A. The error can be avoided by running the respective program in a batch job in the SAP system, if background processing is possible for this program.
- B. The error was caused by a transaction in the SAP system that exceeded the extended memory
- C. The error can be avoided by reducing the memory usage of the respective transaction in the SAP system.

D. The error was caused by a transaction that exceeded the maximum runtime in a dialog work process of the SAP system.

E. The error was caused by a transaction that exceeded the maximum runtime in a background work process of the SAP system.

Correct Answer: AD

QUESTION 2

Which of the following statements are true with regard to SAP online help for an AS ABAP- based SAP system?

(There are 3 correct answers to this question)

A. When installing the online documentation, you have the option to choose between Standard HTML (PlainHtml) and Compiled HTML (HtmlHelp).

B. The online documentation can be installed in the database of the SAP system.

C. The online documentation can be installed on a file or Web server.

D. The online documentation is installed with all available languages by default.

E. Access to the online documentation can be configured with transaction SR13 (Administration:Display of the SAP Library).

Correct Answer: ACE

QUESTION 3

Which of the following statements regarding starting and stopping an SAP system based on AS ABAP +Java 7.0 are correct? There are 2 correct answers to this question.

A. The ABAP-dispatcher triggers the start of the Java part of the instance.

B. The Java-dispatcher and the ABAP-dispatcher of one instance write their respective developer traces in different files on the same directory.

C. If you use the command. "stopsap J2EE DVEBMGS00" on operation system level,

D. only the java part of the instance is stopped.

E. The SAP MC is Java-based, therefore you can only start and stop the Java part of an instance.

Correct Answer: AB

QUESTION 4

Which of the following are consequences of a work process reservation for class "A" jobs? There are 2

correct answers to this question.

Response:

- A. A dedicated background work process is reserved for class "A" jobs.
- B. Class "A" jobs are started with a higher probability at their planned start time.
- C. Class "B" and class "C" jobs can encounter delays.
- D. When all background work processes of an SAP system are reserved for class "A" jobs, jobs of classes "B" and "C" will be automatically promoted to class "A".

Correct Answer: BC

QUESTION 5

An Oracle database instance is running in MOUNT mode. Which tasks can be performed by a database administrator?

There are 2 correct answers to this question.

- A. Perform a media recovery.
- B. Access the Oracle DBA_* views in tablespace SYSTEM.
- C. Recreate a missing control file.
- D. Change the ARCHIVELOG mode of the database.

Correct Answer: AD
