-  **100% Money Back** Guarantee
-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

**QUESTION 1**

An instance of an AS ABAP-based SAP system switches to an operation mode in which fewer background work processes are configured. What happens if all background work processes are working on background jobs at the time the operation mode switch should be executed?

- A. The active background jobs are allowed to finish the current work and the operation mode switch is cancelled.
- B. The active background work jobs are allowed to finish the current work.
- C. The active background jobs are terminated.

Correct Answer: B

QUESTION 2

The attached figure shows the first screen of the SQL Server Performance Analysis transaction (ST04). To tune the SQL Server performance, you need to interpret the information displayed on this screen correctly and possibly change some of the SQL Server settings. Which interpretations are valid and which actions should be taken? (Choose three)

- A. 'SQL Memory Setting' = AUTO (note: not shown in the figure, but possible) allows the SQL Server to allocate memory dynamically.
- B. The size of the procedure cache ('Proc. Cache (MB)') is always determined by the SQL Server dynamically, independently of the 'SQL Memory Setting'.
- C. 'CPUs used by MSS' is determined by the SQL Server configuration parameter affinity I/O mask.
- D. 'Phys. Memory (MB)' is the amount of physical memory assigned to the SQL Server instance.
- E. 'SQL Memory Setting' = RANGE allows the SQL Server to allocate memory dynamically.

Correct Answer: ABE

QUESTION 3

Which steps have to be performed before data can be synchronized between an AS ABAP and a directory server? (Choose three)

- A. Maintenance of host name, port number and product name of the directory server inside the SAP system
- B. Creation of an RFC destination of type "S" pointing to the directory server
- C. Definition of a system user that is used by the SAP system to log on to the directory server
- D. Creation of an RFC connection of type "T" to the LDAP connector
- E. Creation of an SAP user (type "system") that is used by the directory server to connect to the SAP system

Correct Answer: ACD

**QUESTION 4**

Which of the following statements regarding the client concept and the client copy tools in ABAP- based SAP Systems (for example, SAP ECC) are true? (Choose three)

- A. Application data can only be copied from one client to another, when all client-specific customizing is also copied.
- B. Clients can be copied between SAP Systems of the same release.
- C. Client-independent customizing is always automatically copied between clients.
- D. User master records cannot be copied between clients.
- E. Clients can be copied within a single SAP System.

Correct Answer: ABE

QUESTION 5

Which tools in the SAP NetWeaver AS 7.00 ABAP and Java Stack are responsible for the registration process in the System Landscape Directory (SLD)? (Choose two)

- A. The whole mechanism to register an ABAP based SAP system is event triggered. Once a change in the configuration happens, a background job informs the SLD.
- B. The transaction RZ21 allows the configuration of the SLD connection.
- C. SAP systems based on AS Java cannot register to the SLD.
- D. SAP systems based on AS Java can register to the SLD using the SLD Data Supplier Service in Visual Administrator.
- E. The main ABAP transaction to inform the SLD is RZ70. The SAP gateway is involved.

Correct Answer: DE
