-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

**QUESTION 1**

Which of the following are possible assignments when setting up output devices in SAP systems based on AS ABAP? (Choose two)

- A. An output device can be directly assigned to a logical spool server.
- B. An output device must be assigned to a specific spool work process.
- C. An output device does not need to be assigned to a spool server.
- D. An output device can be directly assigned to a physical spool server.

Correct Answer: AD

QUESTION 2

Tuning the performance of an SQL Server instance includes configuring the memory used by this instance on a given host. An optimal memory configuration depends on several aspects such as; memory requirements of the SQL Server itself, hardware resources, other applications installed on the host, or internal usage of the values of the two most important SQL Server parameters - min server memory and max server memory. For which exact purposes can the database administrator use these parameters? (Choose two)

- A. To determine the maximum size of memory used by the whole SQL Server system with help of max server memory
- B. To determine the maximum size of the buffer pool, because it never increases its memory allocation above the value specified in max server memory
- C. To determine the minimum size of the buffer pool, because it never drops its memory allocation below the value specified in min server memory
- D. To determine the maximum size of the data cache, because it never increases its memory allocation above the value specified in max server memory
- E. To determine the minimum size of the data cache, because it never drops its memory allocation below the value specified in min server memory

Correct Answer: B

QUESTION 3

Which of the following terms are correlated to the (ABAP-based) SAP system monitoring infrastructure? (Choose two)

- A. Alert Memory
- B. Alert Server
- C. Data Supplier
- D. Monitoring Tree Element

Correct Answer: CD

QUESTION 4

Due to parameter maintenance, you need to stop (and later restart) the SQL Server instance. How can you perform this? (Choose three)

- A. Stop the service SQL Server (MSSQLSERVER) in Administrative Tools >> Services.
- B. Stop the SQL Server instance in the SAP System Management Console (sapmmc).
- C. Stop the SQL Server in SQL Server Management Studio.
- D. Stop the service SQL Server (MSSQLSERVER) in Administrative Tools >> Services. To perform the stopping (and restarting) as quickly as possible, answer the question whether you also want to stop the service SQL Server Agent (MSSQLSERVER) with '\\No\\'.
- E. Stop the service SQL Server (MSSQLSERVER) in the SQL Server Configuration Manager.

Correct Answer: ACE

QUESTION 5

Which tools in the SAP NetWeaver AS 7.00 ABAP and Java Stack are responsible for the registration process in the System Landscape Directory (SLD)? (Choose two)

- A. The whole mechanism to register an ABAP based SAP system is event triggered. Once a change in the configuration happens, a background job informs the SLD.
- B. The transaction RZ21 allows the configuration of the SLD connection.
- C. SAP systems based on AS Java cannot register to the SLD.
- D. SAP systems based on AS Java can register to the SLD using the SLD Data Supplier Service in Visual Administrator.
- E. The main ABAP transaction to inform the SLD is RZ70. The SAP gateway is involved.

Correct Answer: DE
