**QUESTION 1**

Which properties does ECC Master Production Scheduling (MPS) have? (Choose three)

- A. MPS items can be taken into consideration by a standard MRP run.
- B. Non-MPS items can be taken into consideration by an MPS run.
- C. The planning of MPS and Non-MPS items is always carried out in one planning run.
- D. MPS items can be defined on MRP Area level.
- E. MPS items can be defined on plant level.

Correct Answer: BDE

QUESTION 2

Where can you define the default storage location for the material component of a production order? (Choose three)

- A. Material master (component)
- B. Routing
- C. Production supply area of a work center
- D. Production version (product)
- E. BOM header (product)

Correct Answer: ACD

QUESTION 3

For which of the following objects can you enter a confirmation? (Choose two)

- A. Production order
- B. Production order operation
- C. Trigger Point
- D. Work Center

Correct Answer: AB

QUESTION 4

You create a routing that includes five operations in an initial sequence (10, 20, 30, 40, 50). When capacity bottlenecks

occur, you should be able to use a second sequence on other work centers for operations 30 and 40.

What sequence category do you use to create the second sequence in the system?

- A. Substitute sequence
- B. Standard sequence
- C. Alternative sequence
- D. Parallel sequence

Correct Answer: C

QUESTION 5

You use a planning time fence and fixing type 1. You receive a customer order with a material availability date within the planning time fence.

What do you have to consider in this scenario?

- A. Planned orders that are created by requirements planning are shifted to the end of the planning time fence.
- B. Requirements planning considers only changes that are relevant for scheduling within the planning time fence.
- C. The MRP controller cannot create planned orders within the planning time fence.
- D. Planned orders are created within the planning time fence and automatically firmed by requirements planning.

Correct Answer: A
