**QUESTION 1**

If you need to install a CA Process Automation agent on the UNIX platform, which factor should you consider?

- A. The domain_url field must contain /itpam/.
- B. The agent installer can only be run in interactive mode.
- C. The agent installer will install Java as part of the agent install.
- D. The domain orchestrator needs to be up and running during the install.

Correct Answer: D

QUESTION 2

You want to define a rule to run a set of tasks on the last day of each month. You create an object and name it LastOpenDayOfMonth, which will be used to specify the time to run backups and monthly reports. The object you created, which contains the necessary rule, is a:

- A. Policy object.
- B. Calendar object.
- C. Resource object.
- D. Schedule object.

Correct Answer: B

QUESTION 3

Which data types can you use for dataset variables? (Choose three)

- A. Char
- B. String
- C. Double
- D. ValueMap
- E. XML Fragment

Correct Answer: BCD

QUESTION 4

You are upgrading from CA Process Automation 3.1 SP1 to the latest release. If you use SQL Server in your

implementation, you will need to configure SQL Server to support:

- A. Hex transactions.
- B. Binary transactions.
- C. Binary Large Object (BLOB) transactions.
- D. Extended Distributed Transactions (XA) transactions.

Correct Answer: D

QUESTION 5

When you plan your CA Process Automation deployment, which architecture-related factors should you consider? (Choose three)

- A. Multiple domains can be added to an environment.
- B. Installing a domain orchestrator creates a new CA Process Automation domain.
- C. Orchestrators and agents communicate bidirectionally to perform process operations.
- D. While agents can only exist in a single environment, orchestrators can be configured to be used in multiple environments.
- E. A new universally unique identifier (UUID) is generated in the Domain .xml file to identify any new environments you create.

Correct Answer: BCE
