**QUESTION 1**

Which KSQL queries write to Kafka?

- A. COUNT and JOIN
- B. SHOW STREAMS and EXPLAIN statements
- C. CREATE STREAM WITH and CREATE TABLE WITH
- D. CREATE STREAM AS SELECT and CREATE TABLE AS SELECT

Correct Answer: CD

SHOW STREAMS and EXPLAIN statements run against the KSQL server that the KSQL client is connected to. They don't communicate directly with Kafka. CREATE STREAM WITH and CREATE TABLE WITH write metadata to the KSQL command topic. Persistent queries based on CREATE STREAM AS SELECT and CREATE TABLE AS SELECT read and write to Kafka topics. Non-persistent queries based on SELECT that are stateless only read from Kafka topics, for example SELECT ,? FROM foo WHERE ,?. Non-persistent queries that are stateful read and write to Kafka, for example, COUNT and JOIN. The data in Kafka is deleted automatically when you terminate the query with CTRL-C.

QUESTION 2

Which actions will trigger partition rebalance for a consumer group? (select three)

- A. Increase partitions of a topic
- B. Remove a broker from the cluster
- C. Add a new consumer to consumer group
- D. A consumer in a consumer group shuts down Add a broker to the cluster

Correct Answer: ACD

Rebalance occurs when a new consumer is added, removed or consumer dies or partitions increased.

QUESTION 3

You are building a consumer application that processes events from a Kafka topic. What is the most important metric to monitor to ensure real-time processing?

- A. UnderReplicatedPartitions
- B. records-lag-max
- C. MessagesInPerSec
- D. BytesInPerSec

Correct Answer: B

This metric shows the current lag (number of messages behind the broker)

QUESTION 4

Which Kafka CLI should you use to consume from a topic?

- A. kafka-console-consumer
- B. kafka-topics
- C. kafka-console
- D. kafka-consumer-groups

Correct Answer: A

Example `kafka-console-consumer --bootstrap-server 127.0.0.1:9092 --topic test --from-beginning`

QUESTION 5

Consumer failed to process record # 10 and succeeded in processing record # 11. Select the course of action that you should choose to guarantee at least once processing

- A. Commit offsets at 10
- B. Do not commit until successfully processing the record #10
- C. Commit offsets at 11

Correct Answer: C

Here, you shouldn't commit offsets 11 or 10 as it would indicate that the message #10 has been processed successfully.
