### QUESTION 1

How can cloud providers support a secure use of virtualization for cloud consumers?

- A. By creating a secure chain of processes from the image used to run the VM through to a boot process with security and integrity
- B. By locking, denying, or preventing access and then gradually enabling items as needed
- C. By providing professional services to assist the consumer with configurations
- D. Unfortunately, this is not a possible option for cloud consumers
- E. By enabling full access to the consumer

Correct Answer: A

---

### QUESTION 2

REST APIs are the standard for web-based services because they run over HTTPS and work well across diverse environments.

- A. False
- B. True

Correct Answer: B

---

### QUESTION 3

Identified issues, risks, and recommended remediations are included when determining compliance.

- A. True
- B. False

Correct Answer: A

Audits and assessments are mechanisms to document compliance with internal or external requirements (or identify deficiencies). Reporting needs to include a compliance determination, as well as a list of identified issues, risks, and remediation recommendations.

---

### QUESTION 4

Which concept provides the abstraction needed for resource pools?

- A. Virtualization
- B. Applistructure

C. Hypervisor

D. Metastructure

E. Orchestration

Correct Answer: A

---

#### QUESTION 5

The hub and spoke architecture uses internal identity providers or sources connected directly to cloud providers.

A. False

B. True

Correct Answer: A

A is the correct answer.

Free-form: internal identity providers/sources (often directory servers) connect directly to cloud providers.

Hub and spoke: internal identity providers/sources communicate with a central broker or repository that then serves as the identity provider for federation to cloud providers.
