QUESTION 1

What does the REST API support that SOAP does NOT support?

A. Caching

B. Encryption

C. Acceleration

D. Redundancy

Correct Answer: A

The SOAP protocol does not support caching, whereas the REST API does.

QUESTION 2

Which of the following represents a control on the maximum amount of resources that a single customer, virtual machine, or application can consume within a cloud environment?

A. Share

B. Reservation

C. Provision

D. Limit

Correct Answer: D

Limits are put in place to enforce a maximum on the amount of memory or processing a cloud customer can use. This can be done either on a virtual machine or as a comprehensive whole for a customer, and is meant to ensure that enormous cloud resources cannot be allocated or consumed by a single host or customer to the detriment of other hosts and customers.

QUESTION 3

Which protocol does the REST API depend on?

A. HTTP

B. XML

C. SAML

D. SSH

Correct Answer: A

Representational State Transfer (REST) is a software architectural scheme that applies the components, connectors,

and data conduits for many web applications used on the Internet. It uses and relies on the HTTP protocol and supports a variety of data formats.

QUESTION 4

Which of the following could be used as a second component of multifactor authentication if a user has an RSA token?

A. Access card

B. USB thumb drive

C. Retina scan

D. RFID

Correct Answer: C

A retina scan could be used in conjunction with an RSA token because it is a biometric factor, and thus a different type of factor. An access card, RFID, and USB thumb drive are all items in possession of a user, the same as an RSA token, and as such would not be appropriate.

QUESTION 5

Which of the following is considered an internal redundancy for a data center?

A. Power distribution units

B. Network circuits

C. Power substations

D. Generators

Correct Answer: A

Power distribution units are internal to a data center and supply power to internal components such as racks, appliances, and cooling systems. As such, they are considered an internal redundancy.
