QUESTION 1

When trying to remove large amounts of fluid weight during a treatment, the only parameter that can be controlled by the technician is the

- A. venous pressure.
- B. transmembrane pressure (TMP).
- C. predialysis weight.
- D. dialyzer ultrafiltration coefficient (KUF).

Correct Answer: B

QUESTION 2

Systematic rotation of stock is necessary in order to

- A. provide easier access to supplies.
- B. provide the most efficient use of the storage area.
- C. prevent the use of expired stock.
- D. maintain adequate supply levels.

Correct Answer: D

QUESTION 3

All of the following are necessary to ensure quality control in the area of electrical safety EXCEPT

- A. monitoring of the correct electrical power entering the dialysis facility.
- B. monitoring corrosion- free electrical equipment.
- C. ensuring of proper grounding of dialysis equipment.
- D. periodic inspection of the condition of electrical cords and receptacles.

Correct Answer: B

QUESTION 4

CORRECT TEXT

Which of the following are the Association for the Advancement of Medical Instrumentation (AAMI) recommended maximum levels for chemicals and organisms usually found in water used for dialysis patients?

- (A) Calcium = 2.0 mEq/L
Fluoride = 0.2 mg/L
Chloramines = 0.1 mg/L
Aluminum = 0.01 ug/L
- (B) Acetate = 35 mEq/L
Bicarbonate = 650 g/L
Dextrose = 2.0 g/L
Calcium = 2.5 mEq/L
- (C) Calcium = 0.5 mEq/L
Fluoride = 2.0 mg/L
Chloride = 10 ppm
Bacteria = 200 CFU/mL
- (D) Bacteria = 2,000 CFU/mL
Calcium = 3.25 mEq/L
Sodium = 140 mEq/L
Potassium = 2.0 mEq/L

A. Option A

B. Option B

C. Option C

D. Option D

Correct Answer: C

QUESTION 5

The use of bicarbonate has changed the dialysis delivery to include

- A. decreased need for monitoring blood pressure during dialysis.
- B. increased need for sterilization of solution containers.
- C. poorer clearances at low blood pump speeds.
- D. decreased dialysis time for patients.

Correct Answer: D
