**QUESTION 2**

When should a multi-cluster warehouse be used in auto-scaling mode?

- A. When it is unknown how much compute power is needed
- B. If the select statement contains a large number of temporary tables or Common Table Expressions (CTEs)
- C. If the runtime of the executed query is very slow
- D. When a large number of concurrent queries are run on the same warehouse

Correct Answer: D

---

**QUESTION 3**

Which of the following statements is true of Snowflake?

- A. It was built specifically for the cloud
- B. It was built as an on-premises solution and then ported to the cloud
- C. It was designed as a hybrid database to allow customers to store data either on premises or in the cloud
- D. It was built for Hadoop architecture
- E. It's based on an Oracle Architecture

Correct Answer: A

---

#### QUESTION 4

What step can reduce data spilling in Snowflake?

- A. Using a larger virtual warehouse
- B. Increasing the virtual warehouse maximum timeout limit
- C. Increasing the amount of remote storage for the virtual warehouse
- D. Using a Common Table Expression (CTE) instead of a temporary table

Correct Answer: A

Adjusting the available memory of a warehouse can improve performance because a query runs substantially slower when a warehouse runs out of memory, which results in bytes "spilling" onto storage.
