QUESTION 1

If the propagation behavior is Propagation.REQUIRES_NEW, choose the statement which describes the propagation behavior (select one)

A. Runs in a nested transaction if an active transaction exists. If an active transaction does not exist, the transaction behaves as if Propagation.REQUIRED is set

B. Supports a transaction if one already exists. Throws an exception if an active transaction does not exist.

C. Always starts a new transaction. If an active transaction already exists, it is suspended

D. Always executes without a transaction even if an active transaction exists. Throws an exeception if an active transaction exists.

Correct Answer: C

QUESTION 2

Consider the following code sample which creates an ApplicationContext from a file called "applicationconfig.xml" in the "rewards.internal" package, and a file called test-infra-config.xml in the current folder: ApplicationContext context = new FileSystemXmlApplicationContext ("classpath:rewards.internal.application-config.xml", "file:test-infra-config.xml"); Which of those statements is true? (select one)

A. The use of the "file" prefix is not necessary

B. The use of the "classpath" prefix is not necessary

C. The use of the "." separator is correct

D. Both a and b

Correct Answer: A

QUESTION 3

If you annotate one of your classes with @Component, which of the following should you do to have Spring automatically detect your class and load it as a bean? (Select one or several answers)

A. Ensure that you specify a valid bean name in the @Component annotation

B. Ensure that you specify a valid @Scope for the bean

C. Ensure that you have added in the XML configuration

D. Ensure that is specified in the XML configuration

Correct Answer: C

QUESTION 4

You want to externalize constants from your Spring XML configuration file into a .properties file to your Spring beans. Which mechanism could you use? (select one)

A. Use a PropertyEditor

B. Use a PropertyPlaceholderConfigurer

C. Use

D. Use a BeanPostProcessor

Correct Answer: B

QUESTION 5

Which of the following statements is NOT true about advice types and exception handling? (select one)

A. If a Before advice method throws an exception, the target method will not be called

B. An Around advice type can swallow, or halt the propagation of, an exception thrown by the target method.

C. An AfterReturning advice type can swallow, or halt the propagation of, an exception thrown by the target method.

Correct Answer: C
