QUESTION 1

Which of the following statements is NOT true about advice types and exception handling? (select one)

- A. If a Before advice method throws an exception, the target method will not be called
- B. An Around advice type can swallow, or halt the propagation of, an exception thrown by the target method.
- C. An AfterReturning advice type can swallow, or halt the propagation of, an exception thrown by the target method.

Correct Answer: C

QUESTION 2

Which of the following statements is true concerning configuring JMS Resources with Spring? (Select one)

- A. Spring cannot use a standalone JMS provider
- B. Spring can use the JMS resources provided by an application server
- C. The ConnectionFactory cannot be standalone
- D. The ConnectionFactory cannot be retrieved from JNDI

Correct Answer: B

QUESTION 3

Which of the following statements is NOT true about advice types (select one)

- A. The Before advice method is able to obtain information about the target method's return type
- B. The After advice method is able to obtain information about the target method's return type
- C. The Before advice method is able to obtain the target method's return value
- D. The After advice method is able to obtain the target method's return value

Correct Answer: C

QUESTION 4

Which statement is NOT a characteristic of Spring's PlatformTransactionManager base interface (select one)

- A. When declaring a PlatformTransactionManager implementation inside Spring configuration: as a requirement, the bean id should be "transactionManager"
- B. The PlatformTransactionManager interface abstracts the differences between local and JTA transactions

- C. There are various implementations of JTA transaction managers for different Java EE containers
- D. PlatformTransactionManager is used in both declarative and programmatic transaction management

Correct Answer: A

QUESTION 5

Which of the following statements best describes the benefits of using the Spring Framework with respect to unit testing? (Select one)

- A. Your Java code typically has dependencies on Spring Framework classes which are designed to make the job of unit testing easier
- B. The Spring Framework encourages you to program to interfaces which makes it easier to stub or mock out dependencies in your code
- C. The extensive runtime checks performed by the ApplicationContext when it initializes make traditional unit testing less important
- D. All of the above

Correct Answer: B
