**QUESTION 1**

Which of the following statements best describes the After Throwing advice type? (select one)

- A. The advice is executed after a method invocation throws an exception
- B. Custom processing can be performed before a join point executes
- C. The advice is invoked only if the method returns successfully
- D. The advice is designed to allow exceptions thrown from a join point to be caught and prevented from propagating up the stack

Correct Answer: A

---

**QUESTION 2**

Identify the correct statement(s) regarding the following pointcut: execution (@com.springsource.MyCustomAnnotation void \*(..))

- A. Spring does not support annotations inside its pointcut expression language
- B. This will select join points representing void methods that are annotated by @com.springsource.MyCustomAnnotation
- C. This will select join points representing methods that may have a public, protected or default visibility
- D. This pointcut will in no situation ever be able to select any join points

Correct Answer: B

---

**QUESTION 3**

What is the principal purpose of Spring's Security tag library? (Select one)

- A. To provide a mechanism for applying security to Spring Web Services
- B. To allow certain URLs to be tagged as requiring secure access
- C. To provide functionality in JSP pages, such as hiding certain sections based on roles
- D. To allow Spring Security to be applied to XHTML

Correct Answer: C

---

**QUESTION 4**

@Transactional(timeout=60)

```
public class ClientServiceImpl implements ClientService {  
  
    @Transactional(timeout=30)  
  
    public void update1() {}  
  
}
```

What timeout setting is applied to the timeout inside the update1 method? (Select one)

- A. 60
- B. 30
- C. This will not compile. Attributes such as timeout, propagation and isolation cannot be declared at the class level
- D. This will not compile. Attributes such as timeout, propagation and isolation cannot be declared at the method level

Correct Answer: B

---

#### QUESTION 5

Which of the following statements is NOT true about advice types and exception handling? (select one)

- A. If a Before advice method throws an exception, the target method will not be called
- B. An Around advice type can swallow, or halt the propagation of, an exception thrown by the target method.
- C. An AfterReturning advice type can swallow, or halt the propagation of, an exception thrown by the target method.

Correct Answer: C
