QUESTION 1

In general, why is it NOT a good idea to estimate the testing effort based only on a percentage of development effort? Identify THREE valid reasons.

- A. The quality of the development estimate may be poor.
- B. In general bottom-up estimation is always better than top-down estimation.
- C. The percentage based technique only applies to the V life cycle model.
- D. Using the same percentage every time does not address the level of risk of the application to be tested.
- E. The maturity of the organization, e.g. the quality of the test basis, quality of development testing, configuration management, availability of test tools, also influence the effort needed for testing.
- F. It builds on large set of historical data
- G. The result is almost always a too low estimate for the required test effort

Correct Answer: ADE

QUESTION 2

As part of the improvement program, the organization is also looking at tool support.

Which type of tool could be used to ensure higher quality of the code to be reviewed?

- A. Review tool
- B. Test execution tool
- C. Static analysis tool
- D. Test design tool

Correct Answer: C

QUESTION 3

Which of the following is NOT a typical key challenge for testing in a RAD based development approach?

- A. Re-usable test scripts for (automated) regression testing
- B. Project management and control
- C. No complete requirements specification

D. Time-boxing

Correct Answer: B

QUESTION 4

Which of the following would be the TWO most appropriate examples of entry criteria documented in the system integration test plan?

- A. The percentage of decision coverage achieved during unit testing.
- B. The availability of the latest version of the capture-replay tool (for testing the interface with the newly developed test management tool).
- C. The sign-off of a performance test software release note (test item transmittal report) by both development and testing showing that system performance meets the specified acceptance criteria.
- D. The percentage of acceptance test procedures scheduled for execution.
- E. The percentage of requirements coverage achieved during system integration test.

Correct Answer: AB

QUESTION 5

Which of the following are valid reasons for adopting a different life cycle (from the V model), for increments after the first year?

- i. We do not have a clear understanding of the requirements from a customer perspective.
- ii. We see the risk of delivering requested functionality late as being higher than the risk of delivering a lower quality product.
- iii. We do not have a budget for additional regression testing which is needed to ensure that existing functionality is not compromised by future iterations.
- iv.

The company test strategy does not fit well within the V life cycle model.

- A.
- (i) and (ii)
- B.
- (i) and (iv)
- C.

(ii) and (iii)

D.

(ii) and (iv)

Correct Answer: A
