QUESTION 1

ABC Hospital is planning a Wi-Fi infrastructure upgrade wherethe 802.11b/g APs (HR/DSSS and ERP)

would be replaced with new dual-radio 802.11n/802.11ac (HT and VHT) APs. ABC wants to minimize the

time and cost associated with performing a new site survey, so they will be mounting all of the new APs in

the same locations and with the same cable drops as the existing APs.

What is one performance drawback with this deployment method?

A. Multipath will increase, causing excessive layer-2 retransmissions. The retransmissions will cause latency for VoWiFi handsets.

B. Increased receiver sensitivity on theVHT APs will cause them to continually change channels to avoid co-channel interference.

C. If the existing UTP cabling is not Category 3 or better, the total Ethernet backhaul for each AP will be limited to 100 Mbps.

D. The existing WLAN plan, including the AP locations, may not provide the benefits seen in HT and VHT

802.11 PHY capabilities.

Correct Answer: D

Correct Answer: BE

QUESTION 3

How is throughput capacity scaled in a single channel architecture (SCA) WLAN system?

A. By increasing transmit power and placing APs that are on a single channel farther from one another.

B. By adding more SSIDs to existing APs to spread users across different contention domains.

C. By adding non-overlapping channel layers through the addition of more APs.

D. By using downlink data compression and uplink flow control at the AP.

Correct Answer: C
