- ⚙️ **800,000+** Satisfied Customers

**QUESTION 1**

Given: You support a coffee shop and have recently installed a free 802.11ac wireless hot-spot for the benefit of your customers. You want to minimize legal risk in the event that the hot-spot is used for illegal Internet activity.

What option specifies the best approach to minimize legal risk at this public hot-spot while maintaining an open venue for customer Internet access?

- A. Configure WPA2-Enterprise security on the access point
- B. Block TCP port 25 and 80 outbound on the Internet router
- C. Require client STAs to have updated firewall and antivirus software
- D. Allow only trusted patrons to use the WLAN
- E. Use a WIPS to monitor all traffic and deauthenticate malicious stations
- F. Implement a captive portal with an acceptable use disclaimer

Correct Answer: F

QUESTION 2

Given: ABC Company is implementing a secure 802.11 WLAN at their headquarters (HQ) building in New York and at each of the 10 small, remote branch offices around the United States. 802.1X/EAP is ABC's preferred security solution, where possible. All access points (at the HQ building and all branch offices) connect to a single WLAN controller located at HQ. Each branch office has only a single AP and minimal IT resources.

What security best practices should be followed in this deployment scenario?

- A. An encrypted VPN should connect the WLAN controller and each remote controller-based AP, or each remote site should provide an encrypted VPN tunnel to HQ.
- B. APs at HQ and at each branch office should not broadcast the same SSID; instead each branch should have a unique ID for user accounting purposes.
- C. RADIUS services should be provided at branch offices so that authentication server and supplicant credentials are not sent over the Internet.
- D. Remote management of the WLAN controller via Telnet, SSH, HTTP, and HTTPS should be prohibited across the WAN link.

Correct Answer: A

QUESTION 3

Given: A network security auditor is preparing to perform a comprehensive assessment of an 802.11ac network's security.

What task should be performed at the beginning of the audit to maximize the auditor's ability to expose network

vulnerabilities?

- A. Identify the IP subnet information for each network segment.
- B. Identify the manufacturer of the wireless intrusion prevention system.
- C. Identify the skill level of the wireless network security administrator(s).
- D. Identify the manufacturer of the wireless infrastructure hardware.
- E. Identify the wireless security solution(s) currently in use.

Correct Answer: E

QUESTION 4

What policy would help mitigate the impact of peer-to-peer attacks against wireless-enabled corporate laptop computers when the laptops are also used on public access networks such as wireless hot-spots?

- A. Require Port Address Translation (PAT) on each laptop.
- B. Require secure applications such as POP, HTTP, and SSH.
- C. Require VPN software for connectivity to the corporate network.
- D. Require WPA2-Enterprise as the minimal WLAN security solution.

Correct Answer: C

QUESTION 5

You must locate non-compliant 802.11 devices. Which one of the following tools will you use and why?

- A. A spectrum analyzer, because it can show the energy footprint of a device using WPA differently from a device using WPA2.
- B. A spectrum analyzer, because it can decode the PHY preamble of a non-compliant device.
- C. A protocol analyzer, because it can be used to view the spectrum energy of non-compliant 802.11 devices, which is always different from compliant devices.
- D. A protocol analyzer, because it can be used to report on security settings and regulatory or rule compliance

Correct Answer: D
