**QUESTION 1**

Your organization is using EAP as an authentication framework with a specific type that meets the requirements of your corporate policies. Which one of the following statements is true related to this implementation?

- A. The client STAs may communicate over the controlled port in order to authenticate as soon as the Open System authentication completes.
- B. The client STAs may communicate over the uncontrolled port in order to authenticate as soon as the Open System authentication completes.
- C. The client STAs may use a different, but complementary, EAP type than the AP STAs.
- D. The client will be the authenticator in this scenario.

Correct Answer: B

---

**QUESTION 2**

You must implement 7 APs for a branch office location in your organizations. All APs will be autonomous and provide the same two SSIDs (CORP1879 and Guest).

Because each AP is managed directly through a web-based interface, what must be changed on every AP before enabling the WLANs to ensure proper staging procedures are followed?

- A. Output power
- B. Fragmentation threshold
- C. Administrative password
- D. Cell radius

Correct Answer: C

---

**QUESTION 3**

What EAP type supports using MS-CHAPv2, EAP-GTC or EAP-TLS for wireless client authentication?

- A. EAP-GTC
- B. PEAP
- C. EAP-TTLS
- D. LEAP
- E. H-REAP

Correct Answer: B

---

**QUESTION 4**

ABC Company is implementing a secure 802.11 WLAN at their headquarters (HQ) building in New York and at each of the 10 small, remote branch offices around the United States. 802.1X/EAP is ABC's preferred security solution, where possible. All access points (at the HQ building and all branch offices) connect to a single WLAN controller located at HQ. Each branch office has only a single AP and minimal IT resources. What security best practices should be followed in this deployment scenario?

- A. Remote management of the WLAN controller via Telnet, SSH, HTTP, and HTTPS should be prohibited across the WAN link.
- B. RADIUS services should be provided at branch offices so that authentication server and supplicant credentials are not sent over the Internet.
- C. An encrypted VPN should connect the WLAN controller and each remote controller-based AP, or each remote site should provide an encrypted VPN tunnel to HQ.
- D. APs at HQ and at each branch office should not broadcast the same SSID; instead each branch should have a unique ID for user accounting purposes.

Correct Answer: C

---

**QUESTION 5**

What policy would help mitigate the impact of peer-to-peer attacks against wireless-enabled corporate laptop computers when the laptops are also used on public access networks such as wireless hotspots?

- A. Require Port Address Translation (PAT) on each laptop.
- B. Require secure applications such as POP, HTTP, and SSH.
- C. Require VPN software for connectivity to the corporate network.
- D. Require WPA2-Enterprise as the minimal WLAN security solution.

Correct Answer: C
