QUESTION 1

Which two management protocols are most secure? (Choose two.)

- A. SNMPv1
- B. IPSec
- C. Telnet
- D. HTTPS
- E. SSH

Correct Answer: DE

QUESTION 2

Exhibit

```
Switch1# show vlt brief
VLT Domain Brief
-----
Domain ID:                15
Role:                     Secondary
Role Priority:            32768
ICL Link Status:         Up
HeartBeat Status:       Down
VLT Peer Status:        Up
Local Unit ID:           1
Version:                 5(1)
Local System Mac Address: 00:01:e8:8a:e9:70
Remote System MAC address: 00:01:e8:8a:e7:70
Configured System MAC address: 01:01:02:02:15:15
Remote system version:   5(1)
Delay-Restore timer:     6
```

Refer to the exhibit.

Two S-Series switches are configured as a VLT pair. The output from the first peer switch is as shown.

Which three results can be determined based on the output shown? (Choose three.)

- A. The command back-up destination command has been applied but there is no IP- reachability for Backup-Link connectivity between Peers.
- B. VLTs downstream to other devices will not form because the versions are the same for both VLT peers.
- C. The domain ID was automatically created based on the System MA.
- D. The VLTi peer-link has not been created between the two VLT peers.
- E. The System Mac was statically defined by an administrator, and all downstream switches only see this MAC address.
- F. The restoration of VLT ports after a system has been rebooted has been manually configured.

Correct Answer: AEF

QUESTION 3

Which three cabling items should be considered when stacking N4000 Series switches? (Choose three.)

- A. Use interfaces with the same bandwidth between stack members.
- B. Use a cascade topology for redundancy between stack members.
- C. A QSFP+ breakout cable cannot be used for stacking between members.
- D. Ports from an installed expansion module are not supported with stacking.
- E. A QSFP+ port should be counted as a single port when used for stacking.
- F. Up to eight ports may be used on any switch for stacking purposes.

Correct Answer: AEF

QUESTION 4

The status LED is blinking RED for an N-Series switch. Which system behavior is indicated?

- A. The switch is booting.
- B. A noncritical system error has occurred.
- C. Normal operation is occurring.
- D. A critical system error has occurred.

Correct Answer: B

QUESTION 5

A network engineer needs to remove switch 2 from a stack of four switches permanently. Which process should the network engineer use?

- A. Adjust the stacking cables to take the N-Series switch out of the stack, log into the CLI of the stack, and run the following command:
- B. Adjust the stacking cables to take the switch out of the stack. The master switch will automatically remove the switch from the stack.
- C. Adjust the stacking cables to take the switch out of the stack, log into the CLI of the stack, and run the following command:
- D. Adjust the stacking cables to take the switch out of the stack, and reboot the stack.

Correct Answer: A
