**QUESTION 1**

Which two Azure services can be used to provision Apache Spark clusters? Each correct answer presents a complete solution. (Choose two.)

NOTE: Each correct selection is worth one point.

- A. Azure Time Series Insights
- B. Azure HDInsight
- C. Azure Databricks
- D. Azure Log Analytics

Correct Answer: BC

QUESTION 2

To complete the sentence, select the appropriate option in the answer area.

Hot Area:

To configure an Azure Storage account to support both security at the folder level and atomic directory manipulation.

enable the hierarchical namespace
set Account kind to BlobStorage
set Performance to Premium
set Replication to Read-access geo-redundant storage (RA-GRS)

Correct Answer:

To configure an Azure Storage account to support both security at the folder level and atomic directory manipulation.

enable the hierarchical namespace
set Account kind to BlobStorage
set Performance to Premium
set Replication to Read-access geo-redundant storage (RA-GRS)

A key mechanism that allows Azure Data Lake Storage Gen2 to provide file system performance at object storage scale and prices is the addition of a hierarchical namespace. This allows the collection of objects/files within an account to be organized into a hierarchy of directories and nested subdirectories in the same way that the file system on your

computer is organized. With a hierarchical namespace enabled, a storage account becomes capable of providing the scalability and cost-effectiveness of object storage, with file system semantics that are familiar to analytics engines and frameworks.

QUESTION 3

HOTSPOT

Select the answer that correctly completes the sentence.

Hot Area:

is an object associated with a table that sorts and stores data rows based on their key values.

Correct Answer:

is an object associated with a table that sorts and stores data rows based on their key values.

QUESTION 4

HOTSPOT

To complete the sentence, select the appropriate option in the answer area.

Hot Area:

Answer Area

Relational data uses

	▼
collections	
rows	
keys	
partitions	

 to enforce relationships between different tables.

Correct Answer:

Answer Area

Relational data uses

	▼
collections	
rows	
keys	
partitions	

 to enforce relationships between different tables.

QUESTION 5

To complete the sentence select the appropriate option in the answer area.

Hot Area:

Transparent Data Encryption
(TDE) encrypts

- | |
|--|
| a column to protect data at rest and in transit. |
| queries and their results in order to protect data in transit. |
| the database to protect data at rest. |
| the server to protect data at rest. |

Correct Answer:

Transparent Data Encryption (TDE) encrypts

a column to protect data at rest and in transit.
queries and their results in order to protect data in transit.
the database to protect data at rest.
the server to protect data at rest.
