**QUESTION 1**

What is a key attribute of cloud services?

- A. Manual provisioning
- B. Full pre-allocation
- C. Self-service
- D. Automatic content creation

Correct Answer: C

QUESTION 2

Which is an example of vertically scaling a virtual application?

- A. Cluster two database virtual servers on a single physical server
- B. Migrate a database virtual server to a higher-capacity physical server
- C. Migrate a database virtual server to a less-utilized physical server
- D. Cluster two database virtual servers across two physical servers

Correct Answer: B

QUESTION 3

A small law firm that does not currently have any virtualization technologies implemented has currently merged with another firm of approximately the same size. They are planning to consolidate into a single location.

They have decided to virtualize their servers. They would like to consolidate storage but they are concerned about meeting performance of the different applications on a single storage array.

Which storage array feature should be considered to meet their performance requirements?

- A. Virtual LUNs
- B. Virtual Pooling
- C. Virtual Provisioning
- D. Vertical tiering

Correct Answer: D

QUESTION 4

A company has invested in virtualization for all their non-mission critical applications and many of their mission critical applications. They now want to convert their virtualized silos that are still owned by each line-of-business into a true VDC.

What is an important technical capability gained from doing this?

- A. Reduces provisioning from days to minutes
- B. Leverages a multi-tenant environment
- C. Prepares the data center for cloud
- D. Cuts energy consumption dramatically

Correct Answer: A

QUESTION 5

Which services are typically offered by cloud service providers?

- A. Bundled storage, applications, operating systems
- B. Operating environment, virtualization, applications
- C. Software, platform, infrastructure
- D. Compute, storage, connectivity

Correct Answer: C
