-  **100% Money Back** Guarantee
-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

**QUESTION 1**

As part of a VDC deployment, you are examining the existing storage configurations. On one storage system, you discover over fifty storage pools. The pools contain a single type of drive (SSD, SAS or NL SAS), but many of them contain only a few drives and share the same RAID configuration. The Storage Administrator admits that they have been creating separate pools for each application because they did not want the applications contending for the disks.

As part of the design, you propose to consolidate the existing pools into larger pools of mixed drive types and RAID configurations.

What technology will you need to implement to utilize the new pool design?

- A. Virtual Provisioning
- B. Caching Tier
- C. Storage Virtualization
- D. Storage Tiering

Correct Answer: D

---

**QUESTION 2**

Which is a scale-out NAS solution?

- A. EMC Isilon
- B. EMC VFCache
- C. EMC VNX
- D. EMC Symmetrix VMAX

Correct Answer: A

---

**QUESTION 3**

A small law firm that does not currently have any virtualization technologies implemented has recently merged with another firm of approximately the same size. They are planning to consolidate into a single location. They have decided to virtualize their servers and they would like to consolidate storage. It has been determined that 80% of the file server data has not been accessed in over 90 days.

What can they implement to achieve higher storage efficiency?

- A. A file archiving plan, to leverage inter-array storage tiering
- B. Quotas, to limit the amount of capacity users or groups can consume
- C. File extension filters, to prevent non-business related data from being stored in home directories

D. Vertical storage tiering, to ensure data is placed on the appropriate drive technology

Correct Answer: A

---

#### QUESTION 4

What is the primary GRC concern when using storage from a service provider?

- A. Where the data is stored and how it is protected
- B. How many copies there are of the data
- C. That there is sufficient redundancy to protect the data
- D. That the data is erased when the storage is released

Correct Answer: A

---

#### QUESTION 5

For the last five years, a company has relied on an application to process test results from a manufacturing facility, then generate and archive quality reports. The code can run on any Microsoft Windows Server O/S.

The application was created by a third party company that is no longer in business. The source code is no longer available.

What best describes this?

- A. Vendor lock-in
- B. A legacy application
- C. An enterprise application
- D. Service-oriented architecture

Correct Answer: A
