**QUESTION 1**

A hotel chain runs a simulation on room pricing. They want to estimate revenue, per hotel, within +/- \$10 with 95% confidence ($Z_{\alpha/2}=1.96$). The estimated revenue standard deviation is \$5000 based on previous booking data.

What is the optimal number of simulation trials to run?

- A. A 32-bit operating system was used
- B. The same number of trials was used
- C. A linear congruential generator (LCG) was used (or pseudo-random number generation)
- D. Different seeds for the random number generator were used.

Correct Answer: C

QUESTION 2

What best describes the meaning behind the phrase "Six Degrees of Separation"?

- A. Ability to use about six hops to reach any other node in an extremely large social network
- B. Erdos number of all scholars having written papers with Paul Erdos
- C. Maximum number of edges between nodes in a graph with a diameter of six
- D. Typical distance between nodes that are connected by triadic closure

Correct Answer: A

QUESTION 3

What is an intended application of the MapReduce framework?

- A. Processing can be broken into smaller pieces
- B. Processing a large number of small files
- C. Processing in real time is required
- D. Processing a small subset of data

Correct Answer: A

QUESTION 4

Which scenario would be ideal for processing Hadoop data with Hive?

- A. Structured data, real-time processing
- B. Unstructured data; batch processing
- C. Unstructured data; real-time processing
- D. Structured data; batch processing

Correct Answer: B

QUESTION 5

What does YARN provide over and above MapReduce?

- A. Separate cluster and resource management
- B. Parallelized processing
- C. Serialized processing
- D. Access to HDFS data

Correct Answer: A
