QUESTION 1

What is provided by using link aggregation?

A. Failover mechanism for stateful protocols

B. Failover across EMC Isilon cluster nodes

C. Failover mechanism for stateless protocols

D. Increased overall throughput for a single client

Correct Answer: A

QUESTION 2

Users are receiving notification they are out of space even though when they calculate their file usage, they should have 20% to 30% more space still available.

What is the probable explanation?

A. The quotas are set to include protection overhead

B. The group usage is included with their user quota

C. Snapshot data has not been deleted

D. Deleted files have not been removed from their quota

Correct Answer: A

QUESTION 3

You have been tasked with designing SyncIQ policies for a customer that requires failover and fail back testing.

What should you advise the customer?

A. Fail back replication policies that specify includes or excludes are not supported with SyncIQ

B. SyncIQ will support fail back replication policies that specify directory includes or excludes

C. Multiple SyncIQ policies can point to the same directory on the target cluster

D. Synchronous replication is supported by SyncIQ

Correct Answer: A

QUESTION 4

After enabling auditing on an EMC Isilon cluster, which configuration changes are tracked?

A. Changes made through PAPI system only

B. Changes made by a user in a shell only

C. Changes made by root in a shell only

D. Changes made by a batch file only

Correct Answer: A

QUESTION 5

What does the phrase "failover revert" mean?

A. Undoing a failover job in progress

B. Redirecting clients to the source cluster

C. Redirecting clients to the target cluster

D. Undoing a fail back job in progress

Correct Answer: A
