A. Default gateway

B. Network port

C. Username

D. VLAN tag ID

Correct Answer: C

QUESTION 2

A systems administrator needs to create file systems that will contain very large files. The main goal is to minimize network traffic and provide the best performance possible when accessing these files.

Which Celerra feature fulfills this requirement?

A. FastEtherChannel

B. MPFS

C. SnapSure

D. TimeFinder/FS

Correct Answer: B

QUESTION 3

An NS Control Station is unable to access the back-end when the administrator runs the nas_disk command. What could be the potential problem?

A. The direct fibre connection between the Control Station and the storage back-end has failed

B. The heartbeat service between the Control Station and Data Mover has failed

C. The NBS between the Control Station and the Data Mover has failed

D. The SMB. daemon on the Control Station has failed

Correct Answer: C

QUESTION 4

When creating a file system using Celerra Manager, which feature must first be enabled in order to use the Virtual

Provisioning option?

A. Auto Extend

B. Automatic Volume Manager

C. None

D. Replicator

Correct Answer: A

QUESTION 5

The file system fs01 must be mounted and exported on /mp1 as a CIFS share so only fs01 can be seen by users. To do this, a system administrator will need to

_ mount fs01 to /mp1/fs01 _ export /mp1/fs01 as a CIFS share

What other step will the system administrator need to take to present this share so users only see fs01?

A. create the directory /mp1/fs01 from a Windows host

B. move .etc and lost+found to another directory.

C. mark .etc and lost+found as hidden.

D. unmount fs01 from /mp1

Correct Answer: A
