QUESTION 2

In an xCP application, every queue processor is given one of two skills. A document review process has a package that has an attribute required_skill that is always set to one of those skills.

What is the EMC best practice to ensure queue processors only receive tasks that match their skill?

- A. Create an ACL for each skill and add the appropriate users to each, then use a Process Data Mapper activity to map required_skill to the acl_name of the workitem.
- B. Create the skills on the queue\\'s work queue policy, and then use an activity template to map required_skill to the queue assigned as the next activity\\'s performer.
- C. Assign the queue as the performer of the manual activity, then use the data mapper tool to associate required_skill to the skill on the activity.
- D. Assign the queue as the performer of the manual activity and create an alias set for each skill, then store required_skill as the workflow alias and use the data mapper tool to assign the skill to the activity.
