QUESTION 1

Refer to the exhibit.

In an EMC NetWorker environment, the storage node sn1 is down for maintenance. According to the client properties, what happens when the backup of the client starts?

- A. The backup will fail as the storage node sn1 is not available.
- B. The backup data will be sent to any available storage node.

- C. The backup data will be sent to the NetWorker server.
- D. The backup data will be sent to the storage node sn2.

Correct Answer: D

QUESTION 2

You are logged in to your Windows-based EMC NetWorker server and are attempting to manually run a backup group on the EMC NetWorker Management Console. You are receiving an error when attempting to manually start the group.

What is the most likely reason for the error?

- A. Your user id does not have system administrator privileges.
- B. You cannot manually start backups from the EMC NetWorker Management Console.
- C. The backup group is disabled on the EMC NetWorker Server.
- D. You must run the group backup from the command line.

Correct Answer: A

QUESTION 3

A Dell EMC NetWorker administrator has configured the backup of the "All" save on a Linux host that contains a remote mount point. However, during the restore, the administrator did not see the mount point data but only local data.

What is a possible reason for this behavior?

- A. The `-x` option was not used with the save command
- B. `savenpc` command was not used
- C. Mount point backups require the extended client package
- D. Linux mount point backup is not supported

Correct Answer: D

QUESTION 4

You are logged in to your Windows-based EMC NetWorker server and are attempting to manually run a server-initiated backup via the command line. You are receiving an error when attempting the `savegrp` command. What is the most likely reason for the error?

- A. You do not have system administrator privileges.
- B. You cannot manually start server-initiated backups.

- C. You should use the save command instead of savegrp.
- D. The savegrp command can be run only from a backup client.

Correct Answer: A

QUESTION 5

What is the primary function of the EMC NetWorker job daemon?

- A. Coordinates scheduled backups, and manages the resulting information and statistics
- B. Generates requests for volume mounting and unmounting when required
- C. Identifies NetWorker hosts and their file systems
- D. Identifies application modules and assigns the correct job to the backup API

Correct Answer: A
