**QUESTION 1**

When the EMC NetWorker management console server and the EMC NetWorker server are installed on different hosts, what is required to administer EMC NetWorker server from the EMC NetWorker management console server?

- A. Provide users on the EMC NetWorker management console server the administrative privileges
- B. Provide users on the EMC NetWorker server the administrative privileges
- C. Provide users on the EMC NetWorker management console server the console user privileges
- D. Provide users on the EMC NetWorker server the console user privileges

Correct Answer: A

QUESTION 2

A customer is adding a new jukebox to an EMC NetWorker environment. The jukebox is connected and powered on. The customer powers on the NetWorker server and verifies the new library is visible to the OS. The customer brings up the Device Administration window and verifies the existing jukebox is functioning properly. However when the customer attempts to configure the new library using the Device Administration window function "Configure All Libraries", it fails to configure and instructs the customer that they must use jbconfig to manually configure this library.

What is the most likely reason that the customer is forced to use jbconfig rather than the Device Administration window?

- A. NetWorker is unable to read the device serial numbers.
- B. The jukebox WWPNs are not zoned into the SAN properly.
- C. The /etc/rc3.d/S95networker failed to execute completely.
- D. The tape devices in the jukebox are identified as AIT-2 format.

Correct Answer: A

QUESTION 3

An EMC NetWorker administrator wants to find all the files within a save set that are still browsable by the client. Which command will allow the administrator to perform this task?

- A. nsrinfo
- B. nsrls
- C. mminfo
- D. inquire

Correct Answer: A

QUESTION 4

Which Microsoft VSS component ensures that the application data is consistent when a shadow copy is created?

- A. Writer
- B. Requestor
- C. Provider
- D. Interceptor

Correct Answer: A

QUESTION 5

A client save set is backed up to an EMC NetWorker backup pool and later cloned to a volume in a clone pool. On the volume, what property determines when the volume in the clone pool is a candidate for recycling?

- A. Longest clone retention time of any save set
- B. Longest clone retention time of any differential save set
- C. Longest clone retention time of any full save set
- D. Longest clone retention time of any incremental save set

Correct Answer: A
