QUESTION 3

A company's Dell EMC Avamar server has a 30 day backup retention period. A request was made to restore a file that was deleted 35 days ago. The Avamar server has been running daily maintenance and backup windows successfully.

Will the requested file be available on the Avamar server and why?

- A. No, garbage collection has been running and deletes unused chunks from backups that have expired.
- B. Yes, the latest checkpoint will have the file.
- C. No, HFS check has been running and deletes unused chunks from backups that have expired.
- D. Yes, by default the Avamar server only runs garbage collection once a week.

Correct Answer: A

QUESTION 4

What are the various severity levels contained in each Dell EMC Avamar log?

- A. Info, Warn, Error, and Fatal
- B. Info, Problem, Warn, and Fatal
- C. Info, Problem, Warning, and Fail
- D. Info, Warning, Error, and Fail

Correct Answer: D

QUESTION 5

A multinode EMC Avamar server is backing up clients throughout the world. Each geographical area has a domain and a domain administrator to manage the backup clients in their domain.

What must each domain administrator keep in mind to help ensure that backup schedules do not conflict with the EMC Avamar server blackout window?

- A. Time basis for a backup schedule is the local time of the Avamar Administrator console session
- B. Time basis for clients is the local time of the Avamar server utility node
- C. Time basis for the gsan and the administrator server is the local time zone where the server resides
- D. Time basis for the maintenance schedules is always GMT

Correct Answer: A
