**QUESTION 1**

The Data Mover in slot\_2 has been configured as a primary Data Mover (DM). DMs in slot\_3 and slot\_4 are standbys. What would be the result of a slot\_2 failure?

- A. One of the standby DMs will take over, but if the second DM fails, there will be no further failover operations.
- B. Server\_2 will be halted and the Unisphere event log will indicate that an invalid configuration has prevented a failover operation.
- C. One of the standby DMs will take over. In the event of another failure the remaining standby DM will take over.
- D. Only a standby server containing a valid copy of the configuration will perform a takeover operation.

Correct Answer: A

---

**QUESTION 2**

Which kind of back-end bus connectivity is supported on a VNX storage system?

- A. 4 lane 6 Gb/s SAS
- B. 4 lane 6 Gb/s FC
- C. 2 lane 6 Gb/s SAS
- D. 2 lane 6 Gb/s FC

Correct Answer: A

---

**QUESTION 3**

When installing a VNX for File, which subnet must be used?

- A. The same subnet as the Control Station public network interface
- B. The same subnet as the Control Station private network interface
- C. The same subnet as Domain Server public network interface
- D. The same subnet as the Data Movers public network

Correct Answer: A

---
