**QUESTION 1**

A vSphere ESXi 5.0 server is connected to a VNX LUN with several virtual machines on VMFS datastores. An administrator wants to take a snapshot of one of the virtual machines on the LUN. Which method can be used?

- A. VM SnapShot
- B. SnapView SnapShot
- C. Storage vMotion
- D. MirrorView session

Correct Answer: A

QUESTION 2

A financial company plans to implement an EMC VNX for several application servers. The application servers run high performance data mining processes for large databases and reporting. The customer requires a storage configuration that balances performance and cost. Which disk RAID type will best meet the customer requirements?

- A. RAID 5
- B. RAID 1/0
- C. RAID 3
- D. RAID 6

Correct Answer: A

QUESTION 3

A customer plans to implement shared vSphere datastores using the NFS protocol in their environment. Their VMware support staff has concerns about their administration of these datastores. What features of vSphere v5 would you discuss with them to address their concerns?

- A. Thick virtual disks can now be created to support failover clustering for certain business critical server environments.
- B. The native networking stack has been upgraded to support Version 4 attributes of the protocol.
- C. The network interface adapter teaming feature has been upgraded to support automated path failover in the event of session timeouts.
- D. This type of datastore implementation has been upgraded to enable automated error correction of vmdk files.

Correct Answer: A

QUESTION 4

A customer plans to migrate their virtualized server environment to a new VNX array. They are concerned their storage pool configuration could be compromised by their varied server workload profiles. What vSphere v5.0 feature would you discuss with the customer to address their concern?

- A. Clustered Datastore Affinity
- B. Raw Device Mapping
- C. Native Multipathing
- D. PowerPath/VE

Correct Answer: A

QUESTION 5

When deploying a RecoverPoint/SE solution using vRPAs, which connectivity method is used by the vRPAs to access the replication volumes?

- A. iSCSI
- B. Fibre Channel
- C. FCoE
- D. FCIP

Correct Answer: A
