**QUESTION 1**

A Storage Administrator with a VNX Unified solution is using the CLI to monitor a highly specific view of daily storage performance. They must type long commands to examine the desired statistical information. You have been asked to accelerate this task.

What is the most suitable solution?

- A. Create user-defined statGroups
- B. Use Unisphere Statistics for File
- C. Use Celerra Monitor Tool
- D. Collect statistics from log files

Correct Answer: A

QUESTION 2

A customer is running a cluster of ESX v4.x servers accessing a VNX LUN with a very large number of virtual machines. They are experiencing intermittent transaction acknowledgement delays. What would you recommend to the customer to lessen these delays?

- A. Upgrade to VMFS-5 and utilize hardware assisted locking
- B. Upgrade to vSphere 5 and utilize Block Zeroing
- C. Upgrade to VMFS-5 and utilize Full Copy
- D. Upgrade to vSphere 5 and utilize Thin Provisioning Stun

Correct Answer: A

QUESTION 3

What is the maximum number of backend I/Os generated for every write to the PFS involved in a SnapSure checkpoint?

- A. 3
- B. 4
- C. 5
- D. 6

Correct Answer: C

**QUESTION 4**

You are planning a CIFS DR solution with an EMC VNX for File. The customer wants to use LACP (Link Aggregation Control Protocol) on the Data Movers to provide additional network redundancy for the solution.

What do you advise the customer regarding Data Mover interfaces and CIFS servers for the DR solution?

- A. Identical interface names must be used on the source and destination VNX systems.
- B. Identical interface IP addressing is required for the source and destination VNX systems.
- C. The CIFS server interface is an object that gets replicated with the Virtual Data Mover.
- D. The Virtual Data Mover will use any available interface on the Data Mover for the CIFS server.

Correct Answer: A

QUESTION 5

A customer plans to implement shared vSphere datastores using the NFS protocol in their environment. Their VMware support staff has concerns about their administration of these datastores. What features of vSphere v5 would you discuss with them to address their concerns?

- A. Thick virtual disks can now be created to support failover clustering for certain business critical server environments.
- B. The native networking stack has been upgraded to support Version 4 attributes of the protocol.
- C. The network interface adapter teaming feature has been upgraded to support automated path failover in the event of session timeouts.
- D. This type of datastore implementation has been upgraded to enable automated error correction of vmdk files.

Correct Answer: A
