### QUESTION 1

An atomic requirement:

- A. is understood independently of other requirements or designs.
- B. contains no extraneous or unnecessary content.
- C. uses common terminology understood by the audience.
- D. aligns with the identified needs of the stakeholders.

Correct Answer: A

---

### QUESTION 2

Which approach aligns to approval of requirements at the end of a phase?

- A. Adaptive
- B. Modelling
- C. Predictive
- D. Prioritization

Correct Answer: C

Approval of requirements and designs may be formal or informal. Predictive approaches typically perform approvals at the end of the phase or during planned change control meetings.

---

### QUESTION 3

The likelihood that the requirement will change because it requires further analysis is termed as:

- A. stability.
- B. benefit.
- C. dependency.
- D. penalty.

Correct Answer: A

Stability: the likelihood that the requirement will change, either because it requires further analysis or because stakeholders have not reached a consensus about it.

---

### QUESTION 4

While assessing requirements changes, a business analyst (BA) will determine the formality of the assessment process based on:

- A. governance approach.
- B. business analysis approach.
- C. change strategy.
- D. potential value.

Correct Answer: A

Business analysts will determine the formality of the assessment process based on the information available, the apparent importance of the change, and the governance process. Many proposed changes may be withdrawn from consideration or declined before any formal approval is required. A predictive approach may indicate a more formal assessment of proposed changes.

---

#### QUESTION 5

Which of the following is a guideline or tool, often provided by third parties, used for defining design options?

- A. Future state description
- B. Traced requirements
- C. Existing solutions
- D. Solution scope

Correct Answer: C

Existing Solutions: existing products or services, often third party, that are considered as a component of a design option.
