**QUESTION 1**

Which two statements are true about 64 QAM modulation in the downlink direction? (Choose two.)

- A. The usage of 64 QAM is not dependent on radio channel quality.
- B. The usage of 64 QAM is UE dependent.
- C. The spectral efficiency of 64 QAM is higher than QPSK in strong radio conditions.
- D. The spectral efficiency of 64 QAM is lower than QPSK in strong radio conditions.

Correct Answer: BC

QUESTION 2

Using a cell optimization tool, you detect a sector that takes a large amount of traffic from a distant location that is covered by other sites and is also outside of the coverage predicted for this sector.

Which physical optimization action should you perform first In this situation?

- A. Increase the antenna height and verify the result.
- B. Install TMA and verify the result.
- C. Downtilt the antenna and verify the result.
- D. Increase the transmit power and verify the result.

Correct Answer: C

QUESTION 3

Which KPI must be captured in a drive test with TEMS to review VoLTE accessibility?

- A. Call Setup Success Rate
- B. Handover Success Rate
- C. Call Drop Rate
- D. Voice Quality

Correct Answer: A

QUESTION 4

Which two interfaces are part of a standalone 5G New Radio (NR) architecture? (Choose two.)

A. X2

B. N2

C. N3

D. SI

Correct Answer: D

QUESTION 5

Review the exhibit.

Cell A has neighbor relations with cells B and C which share the same frequency and PCI. Cells B and C do not share any overlapping area.

Referring to the exhibit which statement is correct?

A. Handover performance of cell A is affected.

B. There is no degraded performance expected in any of the cells.

C. Handover performance of cell C is affected.

D. Handover performance of cell B is affected.

Correct Answer: A
