**QUESTION 1**

A GIS administrator needs to give users access to only subset of parcel feature and filed as well as tax record information from a non-spatial table. Users must be denied access to sensitive information in each table.

What should the administrator choose to meet these requirements?

- A. Database view
- B. Query layer
- C. Relationship class
- D. ArcMap joins

Correct Answer: B

---

**QUESTION 2**

Two editors work on the same versioned streets feature class. The editors each work in their own transaction versions, and each version is a child of DEFAULT. Editor A only makes updates to the streetcode and StreetType columns, while Editor B only edits the geometry. Which conflict resolution option will result in the least number of conflicts?

- A. By object (by row)
- B. By attribute (by column)
- C. In favor of the Target Version
- D. In favor of the Edit Version

Correct Answer: B

---

**QUESTION 3**

An administrator runs a nightly compare on a versioned geodatabase. In the morning the administrator checks the compare \_log and sees it is successful, but the number of state did NOT decrease. All users are working on the DEFAULT version and tend to run geoprocessing tools overnight.

Why is the compare NOT removing any state?

- A. The connected map sessions are locking state.
- B. The connected map sessions are locking the compare\_log
- C. The administrator needs INSERT and DELETE permission on the compare\_log

D. The administration needs INSERT, UPDATE and DELETE permission on the state table.

Correct Answer: C

---

#### QUESTION 4

What are dirty areas used to identify?

- A. Areas to be deleted
- B. Areas to be topologically validated
- C. Areas to be edited
- D. Areas to be reconciled and posted

Correct Answer: B

---

#### QUESTION 5

What can be used to improve the performance of join in map?

- A. Use a related instead of join
- B. Add an attribute index on the field
- C. Create a Definition Query on the joined layer
- D. Rebuild the spatial index

Correct Answer: A
