-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

QUESTION 1

SIMULATION

RHCE Test Configuration Instructions

Information for the two systems you will use in test is the following:

system1.group3.example.com: is one of the main sever. system2.group3.example.com: mainly used as a client.

Password for both of the two systems is atenorth

System's IP is provided by DHCP, you can regard it as normal, or you can reset to Static IP in accordance with the following requirements:

system1.group3.example.com: 172.24.3.5

system2.group3.example.com: 172.24.3.10 The subnet mask is 255.255.255.0 Your system is a member of DNS domain group3.example.com. All systems in DNS domain group3.example.com are all in subnet 172.24.3.0/255.255.255.0, the same all systems in this subnet are also in group3.example.com, unless

specialized, all network services required to be configured can be accessed by systems of domain group3.

host.group3.example.com provides a centralized authentication service domain

GROUP3.EXAMPLE.COM, both system1 and system2 have already been pre-configured to be the client for this domain, this domain provides the following user account:

```
krishna (password: atenorth)
sergio (password: atenorth)
kaito (password: atenorth) 
```

Firewall is enabled by default, you can turn it off when deemed appropriate, other settings about firewall may be in separate requirements.

Your system will be restarted before scoring, so please ensure that all modifications and service configurations you made still can be operated after the restart without manual intervention, virtual machine instances of all examinations must be able to enter the correct multi-user level after restart without manual assistance, it will be scored zero if the test using virtual machine system cannot be restarted or be properly restarted.

Corresponding distribution packages for the testing using operating system Red Hat Enterprise Linux version can be found in the following link: <http://server1.group3.example.com/rhel>

Part of the requirements include host security, ensure your host security limit does not prevent the request to allow the host and network, although you correctly configured the network service but would have to allow the host or network is blocked, this also does not score. You will notice that some requirements which clearly do not allow services be accessed by service domain my133t.org, systems of this domain are in subnet 172.25.1.0/252.255.255.0, and systems of these subnets also belong to my 133t.org domain.

PS: Notice that some test questions may depend on other exam questions, for example, you might be asked to perform a series of restrictions on a user, but this user creation may be required in other questions. For convenient identification, each exam question has some radio buttons to help you identify which questions you have already completed or not completed. Certainly, you do not need to care these buttons if you don't need them.

Configure IPV6 Address

Configure interface eth0 on your test system, using the following IPV6 addresses: 1) The address of system1 should be 2003:ac18::305/64

(2)

The address of system2 should be 2003:ac18::30a/64

(3)

Both two systems must be able to communicate with systems in network 2003:ac18/64 (4) The address must still take effect after restart

(5)

Both two systems must maintain the current Ipv4 address and can communicate

A.

explanation

Correct Answer: A

```
nmcli con mod eth0 ipv6.addresses "2003:ac18::305/64"  
nmcli con mod eth0 ipv6.method manual  
systemctl restart network
```

```
nmcli con mod eth0 ipv6.addresses "2003:ac18::30a/64"  
nmcli con mod eth0 ipv6.method manual  
systemctl restart network
```

```
ping6 2003:ac18::30a
```

QUESTION 2

SIMULATION

You are working as an Administrator. There is a common data shared (/data) from 192.168.0.254 to all users in your local LAN. When user's system start, shared data should automatically mount on /common directory.

A. explanation

Correct Answer: A

To automatically mount at boot time, we use the /etc/fstab file. Because /etc/rc.d/rc.sysinit file reads and mounts all file system specified in /etc/fstab. To mount Network Sharing Files also use the /etc/fstab but filesystem is nfs.

1. vi /etc/fstab

```
192.168.0.254:/data / common nfs defaults 0 0
```

2. reboot the system.

QUESTION 3

SIMULATION

SIMULATION There were two systems: system1, main system on which most of the configuration take place system2, some configuration here

Configure IPv6 network. Configure eth0 with a static IPv6 addresses as follows Configure a Static IPv6 address in serverX as fddb:fe2a:ab1e::c0a8:64/64 Configure a Static IPv6 address in desktopX as fddb:fe2a:ab1e::c0a8:02/64 Both machines are able to communicate within the network fddb:fe2a:able/64 The changes should be permanent even after the reboot

On ServerX:

```
nmcli conn show ----> to find the connection name that attaches to the eth0 interface
```

```
nmcli conn modify "System eth0" ipv6.addresses fddb:fe2a:able::c0a8:64/64
```

```
nmcli conn modify "System eth0" connection.autoconnect true
```

```
nmcli conn modify "System eth0" ipv6.method manual
```

```
nmcli conn down "System eth0"
```

```
nmcli conn up "System eth0"
```

On DesktopX:

```
nmcli conn show ----> to find the connection name that attaches to the eth0 interface
```

```
nmcli conn modify "System eth0" ipv6.addresses fddb:fe2a:able::c0a8:02/64
```

```
nmcli conn modify "System eth0" connection.autoconnect true
```

```
nmcli conn modify "System eth0" ipv6.method manual
```

```
nmcli conn down "System eth0"
```

```
nmcli conn up "System eth0"
```

A. explanation

Correct Answer: A

On ServerX:

```
ping6 -T eth0 ddbj,fe2a:able::c0a8:64
```

On DesktopX:

```
ping6 -I eth0 fddb:fe2a:able::c0a8 [redacted]
```

QUESTION 4

SIMULATION

Configure cron and don't allow the user tom to use.

A. explanation

Correct Answer: A

```
# useradd tom
# vim /etc/cron.deny
tom [redacted]
```

QUESTION 5

SIMULATION

Arrange a web service address is: <http://serverX.example.com>, X is the number of your exam machine. Deploy it in accordance with the following requirements: Download <ftp://instructor.example.com/pub/rhce/server.html> Cannot do any modification to file document server.html Rename file document server.html as index.html Copy the file document server.html to DocumentRoot

A. explanation

Correct Answer: A
