-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

**QUESTION 1**

Which of the following statements regarding the DSCP priority is false?

- A. The first 6 bits of the ToS field (leftmost 6 bits) mark different types of services, namely, DSCP priority.
- B. The DSCP priority can be used to classify traffic into 32 types.
- C. Each DSCP priority corresponds to a Behavior Aggregate (BA), and a PHB can be specified for each BA.
- D. You can use some QoS mechanisms to implement PHB.

Correct Answer: B

QUESTION 2

The WRED drop profile defines the following parameters for AF21 traffic: the lower drop threshold is 35, the upper drop threshold is 40, and the maximum drop probability is 50%. Which of the following statements regarding the processing result of AF21 traffic are false? (Multiple Choice)

- A. When the average length of packets in the queue is smaller than 35, packets are discarded.
- B. When the average length of packets in the queue is larger than 35 and smaller than 40, the drop probability of packet is 50%.
- C. When the average length of packets in the queue is larger than 40, packets enter the queue.
- D. When the average length of packets in the queue is larger than 40, packets are discarded.

Correct Answer: AC

QUESTION 3

Which of the following statements regarding data forwarding on a traditional IP network are true? (Multiple Choice)

- A. The traditional IP forwarding is connection-oriented and has low efficiency.
- B. On a traditional IP network, optimal paths are calculated based on the IGP metrics.
- C. All the routers on a traditional IP network need to know routes on the entire network or default routes.
- D. Traditional IP forwarding uses hop-by-hop forwarding.
- E. A traditional IP network cannot provide a good QoS guarantee.

Correct Answer: BCD

QUESTION 4

MPLS is a label forwarding technology, Which of the following MPLS statements is false?

- A. MPLS uses the connection-oriented control plane and connectionless data plane.
- B. The control plane transmits route information and distributes labels. The data plane transmits packets along the created label switched path (LSP).
- C. Switches in an MPLS domain only need to forward packets based on the label added before the IP header.
- D. Compared with traditional IP forwarding, MPLS label forwarding greatly improves the data forwarding efficiency.

Correct Answer: A

QUESTION 5

Which of the following command is used to configure the listening address of the SDN controller?

- A. openflow listening-ip 1.1.1.1
- B. sdn controller source-address 1.1.1.1
- C. controller-ip 1.1.1.1
- D. sdn listening-ip 1.1.1.1

Correct Answer: A
