QUESTION 1

In which of the following cases must the DHCP relay function be enabled?

- A. When the DHCP server and the terminal are not in the same VLAN
- B. When the DHCP server is to be secured
- C. When the terminal is using dot1x authentication
- D. When the terminal is a guest\\'s web portal authentication

Correct Answer: A

QUESTION 2

In the WLAN outdoor scenario, how many AT815SNs can the AP6510DN connect to?

- A. 4
- B. 8
- C. 16
- D. 32

Correct Answer: D

QUESTION 3

Which of the following reliability schemes is supported by the on-board AC deployment mode of a WLAN campus network?

- A. VRRP backup
- B. N+1 hot backup
- C. Stacking hot standby
- D. N+1 cold backup

Correct Answer: C

QUESTION 4

Regarding the description of the AP9330DN feeder, what is wrong with the following statement?

- A. The 5 GHz attenuation value of the same length feeder is less than the 2.4 GHz attenuation value.

- B. All feeders need to be of equal length under the same AP9330DN
- C. Feeder is divided into 4 specifications and cannot be produced on site.
- D. The 5 GHz attenuation value of the same length feeder is greater than the 2.4 GHz attenuation

Correct Answer: AB

QUESTION 5

The United States complies with the FCC standard. In an outdoor road scenario, an AP8030DN uses channels 1 and 149 for road coverage, and a single spatial stream terminal is connected. In the case of considering the MIMO gain, regardless of the feeder loss, what is the maximum transmit power of the AP

2.4 GHz and 5 GHz, respectively?

- A. 2.4GHz -22dBm, 5GHz -20dBm
- B. 2.4GHz -21dBm, 5GHz -15dBm
- C. 2.4GHz -20dBm, 5GHz -14dBm
- D. 2.4GHz -20dBm, 5GHz -20dBm

Correct Answer: B
