QUESTION 1

The following description of distributed storage is correct A. The disks of the distributed storage come from the x86 architecture disk array.

- B. The disk of the distributed storage comes from a personal PC
- C. The disks of the distributed storage come from x86 architecture servers
- D. The disks of the distributed storage come from the x86 architecture virtual machine

Correct Answer: C

QUESTION 2

In Huawei fusion compute, all virtual machine NICs that join the same security group use this security group filtering. To improve security, you need to add the same network card to multiple security groups. B // A network card is only assigned to one security group

- A. TURE
- B. FALSE

Correct Answer: B

QUESTION 3

In Huawei FusionCompute, the following incorrect description of CPU resource QoS is

- A. CPU reservation defines the minimum computing resources allocated when multiple virtual machines compete for physical CPU resources
- B. CPU quota defines the allocation of computing resources by priority when multiple virtual machines compete for physical CPU resources
- C. CPU shares define how multiple virtual machines allocate computing resources proportionally when competing for physical CPU resources
- D. CPU reservation only works when a virtual machine competes for computing resources. If no competition occurs, the virtual machine can exclusively occupy the physical CPU resources.

Correct Answer: B

QUESTION 4

In Huawei FusionCompute, users can manage VMs in multiple ways:

- A. Log in to the virtual machine directly for management

- B. Use the graphical interface for management after logging into CNA
- C. Use the graphical interface for management after logging in to VRM
- D. Use the command line to manage after logging in to CNA

Correct Answer: ACD

QUESTION 5

Which of the following methods are generally supported by a physical switch for remote management (multiple selection)

- A. Telnet
- B. SSL
- C. Web
- D. SSH

Correct Answer: ACD
