QUESTION 1

What are the following steps belong to Huawei BCManager disaster recovery management process? (Multiple choice)

- A. BCManager installation deployment, expansion and upgrade
- B. Build a basic disaster recovery environment
- C. Create a disaster recovery object protection group and related policies
- D. Disaster Recovery Testing and Disaster Recovery

Correct Answer: BCD

QUESTION 2

Huawei Cloud Computing Solution is to meet the business requirements of the enterprise, which of the following features are supported?

- A. VRM cascade expansion
- B. Cluster size adjustment
- C. Virtual machine specification adjustment
- D. Heterogeneous Virtualization Compatibility

Correct Answer: ABCD

QUESTION 3

About the description of the Huawei FusionSphere OpenStack can support the heterogeneous virtualization environment, which is incorrect?

- A. Support to access to Microsoft Azure virtualized environment.
- B. Support to access to VMware virtualized environments.
- C. Support to access to FusionCompute virtualized environment.
- D. Support to build virtualized environment based on FusionSphere OpenStack deploying and extending KVM type compute nodes.

Correct Answer: A

**QUESTION 4**

Which of the following description about FusionStorage related content is correct? (Multiple choice)

A. When the FusionStorage OSD receives Write IO from the VBS, the write IO cache in the SSD cache to complete the node write operation without waiting for be written to the sample disk.

B. FusionStorage supports server memory is used for read cache, NVDIMM, and SSD are used for write cache.

C. FusionStorage read cache using a hierarchical mechanism, the first layer is memory cache, memory cache using LRU mechanism cache data; the second layer is SSD cache, SSD cache using hot-read mechanism, the system will count each read data, and count hotspot access factor; when the threshold is reached, the system will automatically cache data to the SSD, and will move the data which is not

accessed for a long time out of the SSD.

D. The cache and bandwidth of each server node in the FusionStorage cluster are evenly distributed across the various server nodes without the problem of limited bandwidth between the large number of disk- sharing computing devices and the storage devices in the independent storage system.

Correct Answer: ABCD

QUESTION 5

FusionSphere OpenStack authentication Keystone service currently supports docking multiple AD (Active Directory) domains.

A. True

B. False

Correct Answer: B
