QUESTION 1

B companies need to enable the access control on the cluster\\'s virtual machine resource, the following description about the virtual machine resources, which are the wrong? (Multiple choice)

A. The network QoS policy provides bandwidth configuration control ability and does not support traffic throttling between virtual machines on the same host.

B. If the host memory is sufficient, the virtual machine\\'s memory requests can be unrestricted; if the host memory is low, then allocate according to the memory level and share

C. You can assign CPU individual physical cores to a single virtual machine.

D. You can set the resources\\' usage limit on Virtual machines, including CPU, memory, network, disk IOPS and so on.

Correct Answer: AD

QUESTION 2

FusionSphere OpenStack authentication Keystone service currently supports docking multiple AD (Active Diretory) domains.

A. True

B. False

Correct Answer: B

QUESTION 3

In network virtualized environment, VMDq assigns a separate queue to each virtual machine in the server\\'s physical network card via VMM, and the virtual machine is presented as a standalone network card.

A. True

B. False

Correct Answer: B

QUESTION 4

In order to ensure the normal and efficient operation of business applications, in the use of Huawei cloud computing environment, it is necessary to virtual machine computing/storage/ network and other resources to optimize.

A. True

B. False

Correct Answer: A

QUESTION 5

In the scenario of FusionSphere cloud data center, it is recommended to adopt the active/standby mode to deploy and provide management system reliability. (Multiple Choice)

A. VRM (Virtual Resource Manager)

B. ADC (Meta Data Controller)

C. FSM (FusionStorage Manager)

D. MangeOne SC (Service Center)and OC (Operation Center)

Correct Answer: ACD
