**QUESTION 1**

What benefits can a microservices architecture bring? () [Multiple choice questions]

- A. The boundaries of service modules are clearer: microservices emphasize modular structure (REST interface calls). This is very important for large teams Yes.
- B. Support for independent deployment: simple services are easier to deploy. Since the services are autonomous, there will be no systemcrash after a problem occurs.
- C. Simple operation and maintenance: stateless, self-service operation and maintenance make the system no mature operation and maintenance team (mechanism). It greatly saves costs.
- D. Allowing technological diversity: With microservices. You can mix multiple programming languages, development frameworks, and data storage technologies.

Correct Answer: ABD
