QUESTION 1

In the Huawei FusionCloud solution, which of the following is recommended for security rule protection in regions?

- A. No detailed protection for IP addresses and ports is provided for mutual access between management areas in a region
- B. The Internet access management zone provides detailed protection for IP+ ports and is configured on the border wall
- C. The tenant zone accesses IP+ ports in the management zone through service ports and is configured on the border wall
- D. The region internal management zone only performs high-risk port protection based on network segments

Correct Answer: B

QUESTION 2

In the cloud data center migration scenario, the Oracle database layer migration solution can be classified into physical migration and logical migration on data block change modes.

- A. True
- B. False

Correct Answer: B

QUESTION 3

Which of the following statements about the Oracle tools RMAN used to back up, restore, and recover database is correct?

- A. Applies to the migration between different database platforms or versions
- B. The shutdown window is small, and the downtime is related to the total data volume
- C. Some data in the database can be migrated
- D. Online physical backup without interrupting production system services

Correct Answer: B

QUESTION 4

Which of the following is applicable to file-level migration in cloud-data center migration scenarios?

- A. The planned disk space of the destination VM is expanded or reduced compared with that of the source VM

- B. Hosts containing a large number of small files
- C. Ensure that the partition is consistent with that on the source end
- D. Host with high disk usage

Correct Answer: D

QUESTION 5

Which of the following statements about the open protocol of the NDMP for network backup is independent of the platform data storage?

- A. The NAS device that supports the NDMP protocol can directly communicate with the backup server without installing the backup software client on the NAS device.
- B. When the NDMP protocol is used, the backup software, NAS devices, backup media, and production servers must support the NDMP protocol.
- C. During the backup, the NAS device transfers files and directories related to the backup media to the backup server. The backup server prepares indexes for maintenance.
- D. Backup data can be read from NAS storage devices and backed up to backup media instead of production servers. This reduces the workload on production servers.

Correct Answer: A
