QUESTION 1

For a VSP G1000 system serving a mission critical interactive workload, which two statements are true about VSD failover? (Choose two.)

- A. The VSD receiving the workload of a failed VSD is not pre-determined.
- B. Providing reserved capacity to accommodate failure is a requirement when planning for capacity for normal operations.
- C. The workload of a failed VSD board always transfers to its redundant partner VSD board.
- D. The workload of a failed VSD board is dynamically redistributed among surviving VSD boards.

Correct Answer: BC

QUESTION 2

Your customer has an HDP pool dedicated to interactive production workloads. Which two applications are good candidates to share this HDP pool? (Choose two.)

- A. customer relationship management
- B. customer service call taking and dispatch
- C. software development
- D. backup repository

Correct Answer: AC

QUESTION 3

Which three statements are true regarding a VSP G400 configuration for a Microsoft Exchange Server environment? (Choose three.)

- A. RAID 1+0 is a recommended RAID level for the database volumes.
- B. RAID 6 is a recommended RAID level for the database volumes.
- C. HDP is a recommended configuration for database volumes.
- D. Parity group concatenation is recommended.
- E. Microsoft JetStress testing should be used to validate the required performance.

Correct Answer: BDE

QUESTION 4

A customer is replicating VSP G1000 production data using HUR. The customer experiences a network outage. During the outage, the customer reported an increase in response times.

Which two actions would minimize this problem during future network outages? (Choose two.)

- A. Leave the HUR SOM in the default setting.
- B. Set the SOM that suspends pairs during outages.
- C. Add volumes in the journal.
- D. Increase the size of the Journal Pool capacity by adding additional parity groups.

Correct Answer: BD

QUESTION 5

How does the HDLM Extended Round Robin algorithm impact sequential I/O?

- A. It continues to use the same path for a user-specified count of sequential I/O requests.
- B. It remembers a user-determined number of addresses to better implement sequence detection for the storage.
- C. It buffers and reorders I/O requests to improve sequence detection by the storage.
- D. It makes a path decision for every I/O request.

Correct Answer: A
