QUESTION 1

The Continuous Access Storage Appliance (CASA) virtualizes storage at what level?

- A. application level
- B. host level
- C. storage level
- D. fabric level

Correct Answer: D

QUESTION 2

What are three characteristics of B-Series (Brocade) Fabric Manager? (Choose three.)

- A. multiple switch management
- B. single switch management
- C. is embedded in the Brocade switch firmware
- D. provides in-band management
- E. is a separate software package
- F. provides out-of-band management

Correct Answer: AEF

QUESTION 3

How do you detect a possible security intrusion attempt into the SAN?

- A. switch event logging
- B. switch port connection monitoring
- C. switch zone rejection log
- D. switch security audit log

Correct Answer: A

QUESTION 4

A customer has a SAN solution that is configured for disaster recovery using EVAs with synchronous data replication.

An employee suggests that they do not need to back up their EVAs anymore as the data is protected at all times. As a SAN architect, what is your advice to the customer?

- A. You agree with the employee but only if snapshots and clones are maintained at set intervals.
- B. You agree with the employee.
- C. You disagree and recommend continuing with the backups and explain why.
- D. You agree with the employee but only if clones are maintained at set intervals.

Correct Answer: C

QUESTION 5

In IP networks, which two best practices should site planning include? (Choose two.)

- A. use only one controller pair per FCIP link to avoid link congestion
- B. minimize the amount data transferred over the FCIP link(s)
- C. create a design that will accommodate additional storage I/O without impacting normal data traffic
- D. merge the FCIP network with your corporate network for better management

Correct Answer: BC
