100% Passing Guarantee
100% Money Back Assurance

Following Questions and Answers are all new published by HP Official Exam Center

-  **Instant Download** After Purchase
-  **100% Money Back** Guarantee
-  **365 Days** Free Update
-  **800,000+** Satisfied Customers

**QUESTION 1**

Which SAN implementation provides high availability but in the event of a failure may experience reduced bandwidth?

- A. using a single fully meshed, multi-trunked fabric topology
- B. using dual storage paths to the same switch in transparent failover mode
- C. using dual fabrics implemented with multiple storage paths
- D. using a minimum of two SMAs for SAN management with Command View

Correct Answer: C

QUESTION 2

What are two benefits of migrating from one SAN topology to another SAN topology? (Choose two.)

- A. The SAN can scale to support additional storage devices and applications servers.
- B. Zone conflicts and limitations are resolved.
- C. Many smaller switches are consolidated into fewer large fabric switches.
- D. The management of the SAN is simplified.

Correct Answer: AC

QUESTION 3

A customer has an application that is considered mission critical. In the event of a disaster, they want a replication solution that will guarantee that the replicated data is identical to the source without any data loss. Which solution accomplishes this?

- A. synchronous replication
- B. bidirectional replication
- C. asynchronous replication
- D. fan-out replication

Correct Answer: A

QUESTION 4

A customer is testing storage array replication with two storage systems in their data center. The arrays are connected with fiber optic cables that are a total of 30 meters in length. The replication mode is changed from synchronous to asynchronous. How does this affect replication performance in this case?

- A. Asynchronous mode replication is much faster than synchronous mode.
- B. Synchronous mode replication is slightly faster than asynchronous mode
- C. Synchronous mode replication is much faster than asynchronous mode.
- D. Asynchronous mode replication is about the same as synchronous mode.

Correct Answer: D

QUESTION 5

You have a topology with two 16-port switches in a cascaded SAN using four ISLs from each switch. What is the port efficiency of the topology?

- A. 25%
- B. 40%
- C. 100%
- D. 75%

Correct Answer: D
