QUESTION 1

Which statements are true about assets? (Select two.)

- A. Assets can be grouped in folders called asset ranges.
- B. Assets require a MAC address to be categorized properly.
- C. Assets can include bridges, routers, web servers, or anything with an IP or MAC address.
- D. An asset is any endpoint considered significant enough to characterize with details to help with correlation and reporting.

Correct Answer: CD

QUESTION 2

Where are the resource settings located that determine ArcSight ESM User Password Policy?

- A. in the User E2 80 99s Access Control List
- B. in the server.defaults.properties file
- C. in the server.properties file
- D. in either ArcSight Console or Command Center

Correct Answer: B

QUESTION 3

Using ESM 6.5 ArcSight Command Center, which drill down type is available?

- A. query viewer drilldowns into other query viewers only
- B. query viewer drilldowns into channels, reports, dashboards, or other query viewers
- C. dashboard drilldowns into channels, reports, query viewers, or other dashboards
- D. dashboard drilldowns into other dashboards only

Correct Answer: B

QUESTION 4

Which statement is true about starting and stopping ArcSight SmartConnector services?

- A. They are started and stopped independently of the other ArcSight component services.

- B. The order in which they are started and stopped is based on event flow.
- C. How they are started and stopped depends on whether or not the ArcSight Manager is running.
- D. They are started and stopped in conjunction with the Oracle database services.

Correct Answer: A

QUESTION 5

Which statement best describes how baselines are established and used in Query Viewers?

- A. Baselines are created using query results, which are fed into the Image Editor for filtering and display in the related Data Monitor.
- B. Baselines are created using rules. After the rule is triggered, the resulting action establishes a baseline against which future rules are evaluated in the Query Viewer.
- C. Baselines are created using query results. When a query has one or more baselines available, you can compare the current results with a baseline.
- D. Baselines are created using query results. The baseline from the query is used to create a new field set definition that can be run against future events.

Correct Answer: B
