**QUESTION 1**

A customer's network has several servers that are connected to a single fabric. The network also has tape devices that are connected to different fabric. The customer wants to connect the servers to the tape devices without merging the two fabrics.

Which SAN device will allow the customer to archive this goal?

- A. multi-protocol router
- B. network storage router
- C. iSCSI gateway
- D. converged network switch

Correct Answer: A

QUESTION 2

A company uses an HP Enterprise Backup Solution with an HP StoreSure 2000 and a shared tape library for backups to a remote location. In which directions will data flow between devices during a backup job? (Select two)

- A. from the storage system to a replication site
- B. from a host to the storage system
- C. from a host to a replication site
- D. from the storage system to the tape library
- E. from the storage system to a host
- F. from a host to the tape library

Correct Answer: EF

QUESTION 3

A company needs to identify the WAN link requirements to replicate D2D systems across sites. Which tool does HP recommended to accomplish this task?

- A. HP Storage Sizing Tool
- B. HP Systems Insight Manager
- C. DNS Connection Check
- D. Data Storage Product Configurator

Correct Answer: A

QUESTION 4

To accurately propose an HP StoreOnce B6200 implementation, which free HP tool is required to analyze the existing SAN topology?

- A. SAN Designer
- B. HP Intelligent Infrastructure Analyzer
- C. HP Configuration Utility
- D. SAN Visibility

Correct Answer: D

SAN Visibility - SAN Analysis and Diagnostics - Hewlett Packard

<http://h18006.www1.hp.com/storage/networking/sansolutions.html> Free SAN utility to view your SAN Configuration including firmware revisions and ... Helps with SAN Diagnostics and with analysis and optimization of your SAN. ... activities and providing a quick and accurate view of your SAN topology.

QUESTION 5

A storage administrator is running SAN monitoring software on a server other than the backup server. The software is interfering with scheduled backups in the company's tape library. Which action should the administrator take to minimize interference with the operation of the tape devices?

- A. Install the minimum patch-level support for the monitoring software.
- B. Enable the use of SCSI reserve and release.
- C. Modify the kernel tunable parameter vx_ninode.
- D. Implement single initiator zoning.

Correct Answer: D

Enable the use of SCSI reserve and release is for protection error human with tape, not interfering schedule backups with SAN monitoring SCSI reserve or release A device-level protection that is used by Enterprise Media Manager (EMM) to avoid unintended sharing of tape devices and possible data loss problems.
