QUESTION 4

Which HP 3PAR StoreServ software gives the customer the ability to specify a minimum number of IOPs for a volume set?

- A. HP 3PAR StoreServ Dynamix Optimization
- B. HP 3PAR StoreServ Performance Advisor
- C. HP 3PAR StoreServ Adaptive Optimization
- D. HP 3PAR StoreServ Enhanced Priority Optimization

Correct Answer: C

HP 3PAR Adaptive Optimization and QoS can cooperate, but HP 3PAR Adaptive Optimization data migration may impact latency goal settings. For example, when a workload is partially migrated from Fibre Channel drives into NL ones after the collection and analysis of the I/O access pattern by HP 3PAR Adaptive Optimization, depending on the host access I/O pattern, this may have a negative impact on latency and trigger workloads to be throttled towards their in goal. This is an expected behavior if the QoS rule was modeled after the Fibre Channel performance.

QUESTION 5

On which level is encryption implemented in the StoreServ array?

- A. The Virtual Volume level
- B. The Commware Provisioning Group level
- C. The record pair level
- D. The physical disk level

Correct Answer: D

Once data is received at the disk level the disk will act upon this data as a normal data request. The drive electronics are responsible for checking and maintaining data integrity prior to data entering the data encryption engine. We will not discuss in this paper these checks other than to make reference to the checks being performed.
